

HOLDER A2

HOLDER FOR ACU-280 MODULE ELECTRONICS

HOLDER A2 allows for quick and neat installation of the **ACU-280** controller's electronics board inside the **OPU-4 P** enclosure. This setup not only makes the installer's job easier, but also helps improve radio signal quality and communication stability with wireless devices by positioning the controller away from the wall.

Note: Be sure to remove the ACU-280 electronics from its original enclosure before installation.
